1.1 Now for some plotting

[13]:
```
import matplotlib.pyplot as plt
```

[15]:
```
for f in X.columns:
    plt.plot(X[f],label=f)

plt.legend()
```

```

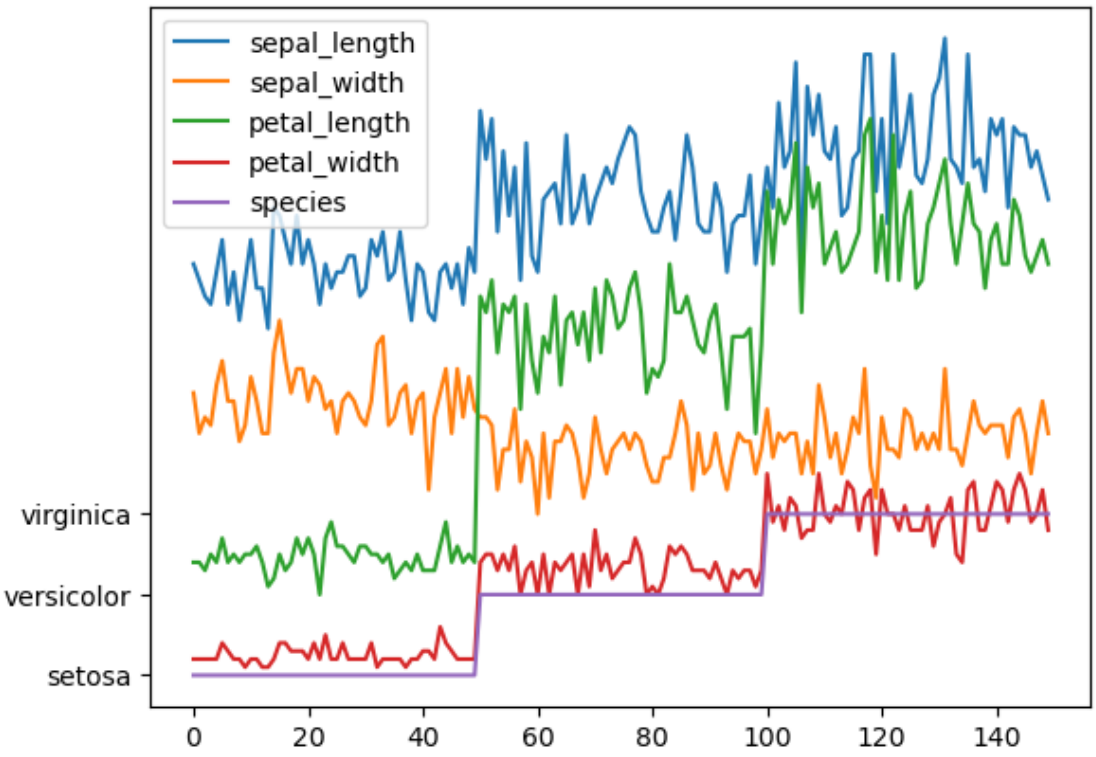
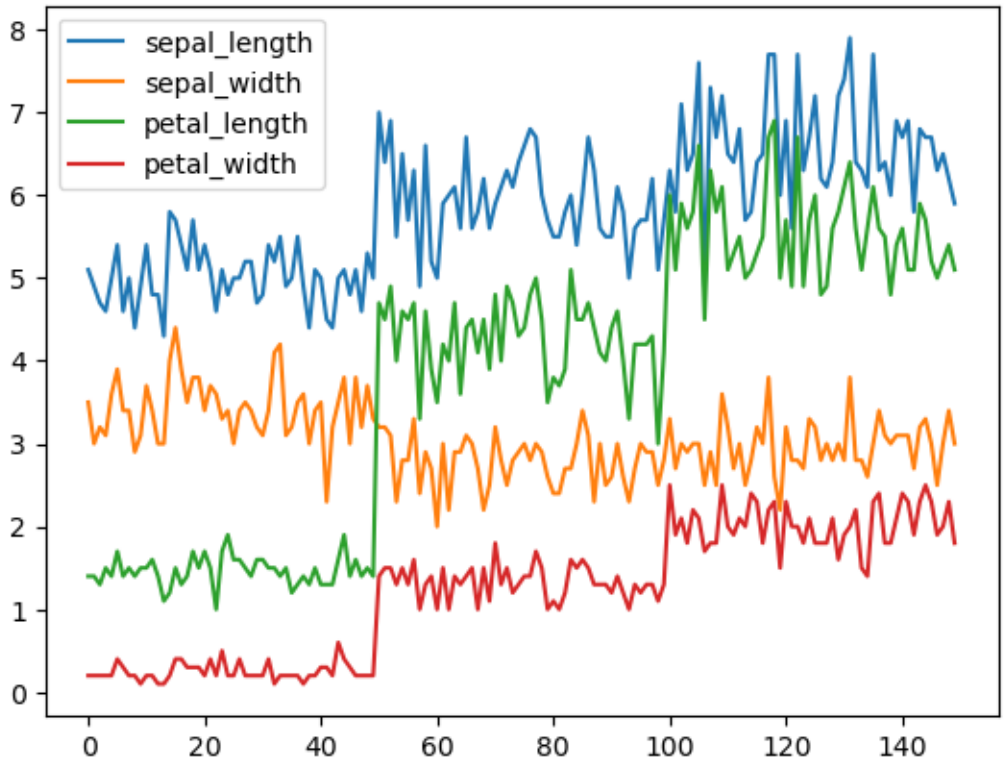
```



[19]:
```
cols = X.columns
cols = cols.drop("species")
for f in cols:
    plt.plot(X[f],label=f)

plt.legend()
```

[19]: <matplotlib.legend.Legend at 0x7f7770085bd0>



[22]:
```
for sp in X.species.unique():
    xx = X[X.species == sp]
    for f in cols:
        plt.plot(xx.index - xx.index.min(),xx[f],label=f"{sp} - {f}")
#plt.legend()
